KTSU, Kunshan Kensetsu Buhin, began developing Heavy Construction track chains in late 2013. We are now proud to be able to provide Track Chains for 15ton to 35ton Excavators – Sealed and Greased with T/Pin Style Master pins for virtually every make and model Excavator within this size range.

Cat, Hitachi, Doosan, John Deere, Komatsu Sealed and Greased Chains are all manufactured by our KTSU China factory using the highest quality steel, heating procedures and assembly procedures. Different from many 'assemblers' of track chains, KTSU produces its own pins/bushings, links and other important components that are critical the longevity of the chains.

Sealed and Lubricated Chains are now available by KTSU – please ask us about the Cat Pro Line Style 943 and 953 chains, D65EX-12 Komatsu chains.

We invite you to learn more about our fast growing Track Chain offerings as we have plans to incorporate more numbers into this important facet of our business.
